Abstract (en)

[origin: WO9314477A1] An anti-theft arrangement includes an alarm device (4) and an alarm-activating device (3). This latter device is controlled by a time-counting device (1) so as to activate the alarm device when the time-counting device has counted down a predetermined time period. In turn, the time-counting device (1) is controlled by a motion or vibration sensing detector (2), which is constructed to prevent the time-counting device (1) from counting down when no movement is sensed by the detector.
