Abstract (en)

[origin: EP0699802A1] The wagon (11) has a rail guide (14) with at least two rollers (12) on vertical axes (23). The distance of the rail guide along the longitudinal axis of the wagon projecting from the end (10) of the frame (3) is adjustable. The rail guide carries the rail (5) between its rollers. The rails are stored on the wagon parallel to its longitudinal axis but inside the line of the rail guide. The rails take up an alignment in plan at an angle to the longitudinal axis of the wagon between the storage support and the guide.
