Abstract (en)

[origin: EP0700230A2] In order to establish VC networks on an ATM network, a different VCH interconnection network for each media or service consisting of information to be transferred is established on a VP network; and VC networks corresponding to these media or services are formed by means of these respective VCH interconnection networks, whereby a plurality of independent VC networks for different media or services are established simultaneously on a single physical network. <MATH>
