Abstract (en)
[origin: WO9526917A1] A compact disc or similar article container (50) is disclosed, which is made from a single sheet of packaging materials configured in a form which is foldable to produce the container, the container having a first section (56, 57, 58, 62) with overlapping components of the materials to form pockets between these overlapping components, the pockets being adaptable to receive and hold a disk-like article, and having a second section (52, 55) with overlapping components of the materials and the second section being foldable over the first section to provide a protective cover for the first section. The container uses no non-biodegradable plastic materials. Also disclosed is a method for configuring and making a container from a single sheet of packaging materials, which can hold up to four disk-like articles, using minimum materials in volume and weight and using no non-biodegradable plastic materials.
