Abstract (en)
[origin: WO9427260A1] The invention relates to a device for controlling a plurality of locks (30), which device comprises lock driving means controlled by a computer. The controlled locks (30) can be arranged for locking access doors to safe deposit boxes, individual cycle security devices in a cycle parking area, blocking means for closing vehicle parking lots, access doors to apartments and the like. The device has for its object to improve known devices and/or increase the application potential thereof. To this end the computer is connected to a code recorder (18) and, when a relevant code is generated to the code recorder (18), the computer releases at least one selected lock (30).
