Abstract (en)

[origin: US5692908A] PCT No. PCT/DE95/00327 Sec. 371 Date Nov. 17, 1995 Sec. 102(e) Date Nov. 17, 1995 PCT Filed Mar. 9, 1995 PCT Pub. No. WO95/26058 PCT Pub. Date Sep. 28, 1995An apparatus for connecting two electrical connecting conductors to an electrical device, in which the ends of the connecting conductors are injection molded into a connection piece and connected to connection contacts which are secured onto a securing pin in a manner lying one behind the other and coaxially isolated by an insulating piece and, by means of a screwing part, the connection contacts, make contact with connection elements which are likewise mutually electrically isolated by means of an insulating part. In order to secure any desired rotational position, the connection piece has a peripheral toothing of the electrical device. This permits space-saving production, which is amenable to assembly, of an electrical connection between connecting conductor and electrical device, it being possible to bring the external connecting conductors into a desired position with little outlay.
