Abstract (en)

[origin: EP0700650A2] The bracket structure, for mounting a self to a wall for shelving of different thicknesses, has a carrier and clamping section (1) round the rear end of the shelf, and a covering section (11) without a carrier or clamping function. The carrier/clamping section (1) has a lower laying surface (2) projection for the shelf below the shelf grip zone (3) which is less than twice the height of the grip zone (3). A projecting mounting head (4) with a clamping screw (7) for the shelf is over the clamping zone (3). The covering section (11) is placed on the mounting head (4) of the carrier/clamp section (1) and its position is set vertically by the setting of the clamping screw (7). The carrier/clamp section (1) and the covering section (11) are hollow injection moulded bodies of plastics, and esp. polyamide.
