Abstract (en)
An injection molding machine in which a clamping unit (2) and an injection unit (3) are disposed laterally. A display (6) is provided on an injection side gate (31) surrounding the injection unit (3). The display (6) is movable with opening and closing motion of the injection side gate (31). Alternately the display (6) can be provided on a clamping side gate (21) surrounding the mold closing unit (2). The molding machine does not require a large space for its installation and the display (6) is well viewed. <MATH>
