Abstract (en)
[origin: WO9526788A1] A boot/ski interface device including an elongate plate (45) mounted between two widely spaced abutments and movable between a lower position in which the plate is parallel to the ski and an upper position in which at least one end of the plate is raised above the ski. The device is characterised in that it includes passive means (62) for preventing a build-up of snow under the plate (45).
