Abstract (en)

[origin: WO9429045A1] A process is disclosed for installing a conduit pipe system consisting of elements having a compressible area such as fittings, connectors and shaped parts, as well as conduit pipe sections (13). For that purpose, the parts to be joined are moved towards each other on a stationary pressing station until they are correctly oriented and spaced from each other. Once they are adjusted, the parts are compressed; the individual operations are preferably carried out automatically. Also disclosed is a device for carrying out the process with at least two pressing jaws (13-16) which are exchangeably arranged in a stationary press (55); the bottom platen of the press is at the same time the supporting table.
