Abstract (en)

Water-tight diving suit. The edges of the open extremities of the sleeves (3) and the trousers (4) of the suit and the neck (5) have a hem which is folded inwards and secured, for example by stitching, to the inside edge of the suit, so as to form a tubular pocket. A tape-like stiffening element (503, 603) made of elastomeric material is housed inside this pocket. The suit can be made as a one-piece or two-piece suit. In the case of one-piece suits which combine both jacket and trouser parts, these have, in the region of the access opening (2) which can be closed by a zip (201), an edge with a hem (204) folded inwards and secured, for example by stitching, to the inside edge of the suit, so as to form a tubular pocket (205), inside which a tape-like element (206) made of elastomeric material is housed. The said suit may be further provided with a separate hood (101).
