Abstract (en)

[origin: EP0701850A2] The cube game comprises simple solid cubes (C) which are assembled together to form a solid composite cube (1). The simple cubes have on their side faces elements of different patterns. When the patterns are reconstituted by assembling the simple cubes they present different patterns on the different faces of the composite cube, and thus extend in three dimensions. The faces of the simple cube pieces carry parts of the pattern belonging to at least two different patterns. The pieces allow several assembly configurations enabling reconstituting a number of patterns greater than the number of external faces of the composite solid, by modifying the assembly mode.
