Abstract (en)  
[origin: EP0701955A1] The container consists of an outer member designed to receive a moisture absorbent pad, and a liner forming a false bottom for the container, which is hermetically sealed. The liner has one set of holes in its base and a second group between the liner and outer member to provide for gas exchange. The outer element has projections on its base to form gas exchange channels and other to support and/or fix the position of the liner. The outer member and the liner are made from polypropylene, welded together with the absorbent pad between.
