Abstract (en)  
[origin: EP0702342A2] Each control emitter (6) has an infra-red diode transmitting instructions connected to two buttons to set off respectively a call-acknowledged message and an emergency call message. The call emitter (5) has an infra-red receiver with its logic circuit to set off the appropriate message according to the instruction. Each control emitter has an identification code contained within the transmitted message. The call emitter has two separated magnetic detectors to transmit an acknowledgement not identified message and an emergency call message. It has an indicator light set off by sending the call message and time switched or stopped by the sending of the call-acknowledged or emergency message.
