Abstract (en)
[origin: EP0555653A1] A switch plug for a strip connector on printed-circuit board circuits, especially on databus boards, having a female strip, which contains a multiplicity of sockets for accommodating a male strip, in each case contains at least two contact elements which are allocated to sockets and form a short-circuiting link between the sockets as long as no male contact is inserted, the insertion of the male strip and the spreading apart of the elements which accommodate the male contacts leading to an interruption in the short-circuiting link. The short-circuiting link is produced by means of a direct contact between the sockets or via a contact insert which is inserted into the base body which supports the female strip. <IMAGE>
