Abstract (en)
[origin: GB2279057A] A sealed container 50 containing a carbonated beverage 52 held under pressure includes a hollow insert (10 fig 2) which contains gas at pressure, which has a restricted orifice (20 fig 9), which floats on the beverage, and which includes orientation means (18, fig 9) which orientates the insert so that the restricted orifice is at the lower most part of the insert and submerged in the beverage (52). The orientation means is symmetrically arranged relative to a vertical plane containing the restricted orifice. The insert may be provided with one-way valves to control the entry and exit of gas. <IMAGE>
