Abstract (en)  
The lead-in arrangement for a shower-bath according to the invention provides for the use of a hide-away lead-in means (24) for the flexible hose (28) connecting the hand-held portion (22) of the shower with the water supply installation. Preferably, said hide-away lead-in means (24) is provided in one of the attachment means of the rod (14) along which the support means (16) for the hand-held portion (22) of the shower is capable to slide. This solution offers definite convenience and practical advantages as compared to prior-art ones, in which the flexible hose is hanging freely inside the shower booth. <IMAGE>
