Abstract (en)

[origin: EP0703333A1] The door flap of the goods vehicle is secured by a rotating locking bar on the flap and a locking profile on the vehicle frame. The bar has a main radial flange which grips the locking profile. A secondary locking catch on the bar engages a secondary locking catch on the locking profile for a secure fastening. The locking arms and the corresponding parts of the locking profile are shaped to pull the door flap closed when the locking bar is rotated. The mating faces of the catches are shaped to pull the door flap closed.
