Abstract (en)
[origin: EP0703520A1] The gear-change lever has a gear-change lever rod for switching between the different gear ratios, pivoted relative to a bearing block, secured to a fixed part of the chassis. The end of the gear-change lever rod projecting into the passenger space is fitted with a removable handgrip, with an internal bore of the handgrip having a number of spring locking tongues cooperating with the insert gear-change lever rod. The gear-change lever rod cooperates with guides (7,78) within the bore, both above and below the spring locking tongues, preventing the force exerted on the handgrip being transmitted to the latter.
