Abstract (en)

[origin: EP0703589A1] The switch mechanism is mounted in a box (20) and is operated by an on/off switch outside the mechanism. The on/off switch connects with protrusions on a bistable rocker circular section (25). The circular section has a hole for a connecting rod, which connects the circular section mechanically to an internal closing lever (24) hinged at one end. When the circular section rotates, the connecting rod closes the internal lever onto an electrical connector (23) closing the connection.
