Abstract (en)
[origin: WO9427569A1] A method employing a novel combination of a skin care composition and cosmetic applicator pad is provided for at-home skin degreasing, peeling and/or exfoliating and moisturizing, which is gentle in that the concentrations of the active skin peeling and/or degreasing, exfoliating and moisturizing ingredient, principally an alpha hydroxy acid, or a mixture of alpha hydroxy acids, preferably including acetone, is far lower than that routinely used for professional use in the offices of professional dermatologists, aestheticians and/or cosmetologists. The composition of the present invention is provided in a suitable pharmaceutical vehicle and is presaturated into a convenient cosmetic applicator pad.
