Abstract (en)

[origin: CA2163673A1] A process is disclosed for lining a pipe (2), in particular for sanitation purposes. In a first step, a foil or woven material (13a-13c; 113a-113d) is introduced into the pipe (2). An inner lining which covers the area to be lined of the pipe (2) may be created on site from said foil or woven material in the pipe (2) itself. In a second step, the foil or woven material (13a-13c; 113a-113d) is applied in the radial and/or axial direction on the area to be lined of the inner wall of the pipe (2), and in a third step the foil or woven material (13a-13c; 113a-113d) applied on the inner wall of the pipe (2) to be lined and impregnated with a hardenable medium is hardened.
