Abstract (en)  
The screening device consists of a number of intermeshing polygonal discs (3). They are mounted on shafts (2) coupled together and driven in the same direction via belt drives (4). The discs are mounted in a staggered arrangement so that they can intermesh without touching and screen apertures are formed longitudinally between shafts and transversely between discs. The space between intermeshing discs is bridged by projections (6) near the periphery of the discs, pref. at the corners. Additional projections may be provided further in on the discs.

Abstract (de)  
Die Scheiben (3) eines Scheibensiebes sind mit Bolzen (6), Noppen o. dgl. Vorsprüngen besetzt. Die Vorsprünge streichen eng an der jeweils benachbarten Scheibe vorbei und befreien sie von etwa anhaftendem Material. <IMAGE>
