Abstract (en)

[origin: EP0704561A1] The appts. to take a fibre web (2) from the delivery roller (4) of a carding machine has a suction system and permeable belt (5). A straight section (9) of the belt (5), at the level of the delivery roller (4), takes the web (2) at the same linear speed as the surface speed of the roller. It is on the same line as the roller axis (7), between the suction system and the roller. Also claimed is a carding machine with at least two delivery stations with delivery rollers to pass their webs to the permeable belt.
