Abstract (en)
[origin: EP0704657A2] The burner comprises a swirl generator for the combustion air-stream and fuel injection devices. Inside a first section (200) of the mixing passage (220) downstream of the swirl-generator (100) are transfer passages (201) delivering the current (40) to the downstream portion (20) of the mixing passage. The latter can be tubular, and the number of transfer passages can be the same as that of the dividing bodies in the generator. Downstream of the transfer passages there can be drillings (21) in the mixing passage tube for air injection in the flow and peripheral directions.
