Abstract (en)
[origin: WO9500063A1] Described is a trolley suitable for the commercial cleaning and disinfection of floors and other surfaces. Its understructure consists of a continuous or open-worked plate (12) made entirely of plastic or a frame (3) made entirely of plastic, on which castors (4) are directly mounted. The edge of the plate (12) or frame (3) has a profile section extending round it. This decreases the susceptibility of the lower regions of the trolley to corrosion without affecting its servicability.
