Abstract (en)
[origin: WO9428959A1] An inhalator has a container (1) for water and an inhalation agent and a lid (2) provided with a substantially central opening (3) and with several openings (4) through which ambient air is supplied to the inside of the container. Water and the inhalation agent are evaporated together in the container at a temperature equal to or higher than body temperature which does not exceed 65 DEG C. The mixture of steam and inhalation agent is swirled by the outside air supplied into the container.
