Abstract (en)

[origin: WO9425127A1] The invention is related to a coin activated automaton particularly arranged for bingo game close according to the ordinary rules of bingo. The automaton includes among other things a microprocessor which controls the selection of the numbers which are in the 25th. fields of a certain bingo piece. The actual piece is fetched among a great number of pieces generated by a certain algorithm. The collection of pieces are a sufficient amount of numbers so as each piece experience as random generated. At the same time there is drawn a list of prizes of this round of the game. In this way it is possible in single game or round of the game using a few pieces to play with the same probability for top prize as in ordinary bingo halls, but attaining the appeal of the game as for the game of impulse it is necessary that a relative small prize occurs frequently. The pieces bought by the player are displayed at the front panel of where also the necessary operating equipment for choice of new game or the way of payment are placed.
