Abstract (en)
[origin: WO9500389A1] A watercraft with a float (1) provided with two paddles (2, 3) symmetrically arranged on either side of the axis (AB) corresponding to the straight line along which the craft is propelled. Each paddle is mounted at a certain depth on the end of an arm (4, 5) by means of a rod (6, 7) extending at right angles to said axis (AB). Two stops (8, 9) are arranged on either side of each paddle to restrict its pivotal movement caused by the rolling motion imparted to the craft by its passenger.
