Abstract (en)

[origin: WO9500721A1] The invention relates to a sanitary spray arrangement to be used in connection with a conventional toilet bowl (2) and toilet seat (1). The under side of the toilet seat (1) is, in a manner known per se, provided with a curved arm (6) supporting a sprayer head (7) and being pivoted by a shaft (5) extending in the transverse direction of the toilet seat. The shaft (5) extends slightly off the seat (1) where it is provided with a handle (9), by means of which the arm (6) is oscillably movable to-and-fro. According to the invention the handle (9) is also pivoted in lateral direction for operating a valve (10, 11) for regulating the flow of water to the sprayer head (7), which valve is influenced by the entire lever action of the handle (9).
