Abstract (en)

[origin: WO9500921A1] A configurable analog and digital array is produced in hierarchical structure in at least two planes. It comprises at least two first-order matrix arrangements, each having a plurality of basic units in rows and/or columns which are at least partly analog basic units, and a first switch matrix for the controllable mutual connection of the signal inputs and outputs of the basic units and for the connection thereof with matrix inputs and outputs, and at least one second-order matrix arrangement having a second switch matrix for the controllable mutual connection of the matrix inputs and outputs of the first-order matrix arrangements and for the controllable connection thereof with array inputs and outputs.
