Abstract (en)  
[origin: EP0706194A1] The device has a housing and circuit board, an overvoltage tapping, a slider (4), a spring, an earth plate and a signalling element. The slider is forced against the housing wall by the spring (8) at a support surface (17) and one edge (20). A shaped solder part (7) is only minimally loaded by the spring force on the slider. The slider is made in one piece of a carrier part with angled contact vanes (10), a spring holder, a contact surface (12) for connecting the overvoltage tapping (3) to earth via an earth plate (27), a groove for holding the signalling element and a spring part (14). The spring part has a long spring arm and is angled at its sprung end to form a bar carrying the shaped solder part (7) and angled support surface (17).
