Abstract (en)

[origin: WO9501234A1] A device for gripping a casting core, especially a sole core (1), with a clamping device (3) having clamping means (2), in which the core (1) has at least one recess (4), aperture, passage or the like into which the clamping device (3) with the clamping means (2) engages, is designed for the automatic handling of cores, especially for fully automatic piling, with the simplest construction and preventing damage to the cores during handling, in such a way that the clamping means (2) take the form of clamping jaws (2) which can be pressed preferably positively against the inner wall of the core.
