Abstract (en)

[origin: WO9530053A1] A crash barrier impact damper is disclosed to provide protection from obstacles on roads. It comprises a head section (2), a support bracket (4), damping elements (3) arranged serially between the head section and support bracket, and the lateral crash barrier oriented towards the road. The support bracket (4) is essentially a unit with inclined surfaces which stands perpendicularly and tapers in a direction opposite to the traffic flow, with at least one deflection wall (6) oriented towards the road.
