Abstract (en)
[origin: EP0707185A2] The refrigerator or freezer has a thermally insulated appliance housing (1) and a hinged access door (2) which can be fitted with a false door front (5) for matching the adjacent kitchen units. The door hinges each have a fixed hinge arm (7) secured to the appliance housing and a pivoted hinge arm (8) secured to the door, with a centring piece associated with the fixed hinge arm which is adjusted in dependence on the thickness of the adjacent kitchen unit sidewall (9), so that there is no visible gap between the hinge arm and the latter.
