Abstract (en)
[origin: EP0707330A1] The circuit breaker includes the vacuum tube (2) which has contact breakers (2A,2B) and an actuating rod (8) which passes inside a lower tubular section (1B) with an inner metallic section (7). The two units are enclosed by a moulded synthetic resin section (1). The lower end of the tubular section allows passage of the actuating element rod extension (8A) and the outer metallic section clamps onto a fixing block (9). Movement of a side arm (17) effects the make/break circuit by moving the actuating element rod.
