Abstract (en)

[origin: WO9427648A1] The present invention provides a water repellent dressing which is made from a soft, smooth, conformable, air-permeable, hydrophobic fabric. The fabric contains polymeric fibers of an extruded blend of a polymer and a fluorochemical oxazolidinone. These extruded fibers may be used to make a nonwoven, knitted or woven fabrics. The dressings of the present invention are especially useful when in contact with skin because the dressings are water repellent and soil resistant but allow air and vapor to pass through the dressings.
