Abstract (en)
[origin: WO9530459A1] A longitudinal adjustment device (1) for a ski binding component (7) consists of a guide rail (2) secured to a ski (3) on which an adjusting plate (5) bearing the ski binding component (7) is guided and can be locked. In the adjusting plate (5) there is a catch (10) which can be moved across the ski and having engagement teeth (12) on its underside which engage with teeth (13) on the upper side of the guide rail (2). The catch (10) is spring (15) loaded and has an actuator (18) with two surfaces (22, 23) bearing on a lateral section (21) of the adjusting plate (5).
