Abstract (en)  
[origin: WO9530517A1] The invention concerns a razor head for the pivotable holding of a razor blade unit in a shell-like support (48, 48'), which is arranged on the free ends of two movable arms (44, 51) arranged opposite to each other of a fork support for the razor blade unit and with complementary curved shaped surfaces on the under side of the razor blade unit on which they are correspondingly pivotable, whereby a spring biased plunger (23) is guided between the two arms (44, 51) to retain the separating movement in the stop position during fixing of the razor blade unit.
