Abstract (en)
[origin: DE4322648C1] In the case of the apparatus according to the invention having a coil (1) with four legs, two specially designed plug locations (4) and (5) respectively on the apparatus housing (6) are assigned to each of the two winding ends (2, 3). The coil (1) which has four legs is electrically connected via connecting terminals (A1, A2) which are provided with shape coding matched to the plug locations (4, 5) and can be inserted into them. This construction reliably prevents an accidental short-circuit. <IMAGE>
