Abstract (en)
A honeycomb panel (1) for the building industry is made of a material such as cellulose material, the moisture content of which is variable, and the strength and/or the form of which is sensitive to the action of moisture, and has a moisture-impermeable layer (7) applied to the outer side of at least one of the panel surfaces, which moisture-impermeable layer (7) is a polyethene film or an aluminium film. The honeycomb panel (1) can have the form of a sandwich construction, comprising a honeycomb core (8) and two support plates (5, 6) which define the panel faces, between which the core (8) is glued, the moisture-impermeable film layer (7) being applied on the outside of the panel (1) to one of the support plates (5). The moisture-impermeable layer (7) can, for example, be a film (7) of polyethene or of aluminium with a thickness between 12 and 20 μ m. The outer surface of the film (7) can be structured by subjection to a corona treatment. The honeycomb panel (1) can easily be painted or wallpapered. <IMAGE>
