Abstract (en)

[origin: EP0708033A1] The packaging container, for lubricants and sealants and the like, is a filled film tube which is closed at both ends. A closing piston (9) is at one end of the film tube, where the section of the film tube behind the piston on a piston advance can be held back against the piston advance direction. The end of the tube, away from the piston, is closed by a flange plate (3), at right angles. The film tube had an inner polyamide coating and an outer polyethylene cladding. The plate is of polyamide or polyethylene, or aluminium. The film tube, piston and piston ring and/or the flange plate are pref. of polyethylene.
