Abstract (en)
[origin: EP0708049A1] The device has the web (10) wound on a first drum (11). It guides the unwinding web onto a second (empty) drum (12), during which the web is split by a tape (20) or similar. Its free end is movable by a transporting device (3) along a guide rail from one side of the web to the other, and able to be fixed to the second drum. A carriage is moved along the guide rail. The carriage has a holding device for the tear tape (20), the free end of which can be fed from one side of the web to the other.
