Abstract (en)

[origin: EP0708209A1] All constructional elements (1-3) within the set are of the same length. Each element has a union nut at one end, and an outer thread at the other end, which corresponds to the thread of the nut. The T-shaped pipe element has a pipe socket which projects at right-angles. It has an outer thread, or coupling elements for a claw coupling. The double pipe element has a similar projecting connection socket, also with coupling elements for a claw coupling. The valve element is formed as a conventional slanted set valve. The double pipe element may also have a ball valve.
