Abstract (en)
[origin: EP0708210A1] The brick has an integrated insulating mass (6) as the connecting brick. The building brick can have an insulating layer or plate on one side. It has dovetailed or inclined grooves in which the insulating layer or plate is anchored by tongues complementary with the grooves. The insulating mass or plate is made from mineral foamed clay and the brick is made from natural or artificial stone. The insulating plate can be flat along the edge for butt connection of the insulating plate between adjoining connecting bricks.
