Abstract (en)
[origin: EP0708458A1] The switching device has a housing (10) enclosing a coil carrier (12) in which a pole sleeve with an attached switch element is received. The pole sleeve is coupled via a contact device to the earthed parts of the switching device, e.g. the housing and the coil carrier, until the terminal (16) for the coil winding conductor is separated from a current source. Pref. the contact device is provided at the opposite end (26) of the switching device to the terminal and uses a pin fitting into a respective bore in the rear wall of the housing.
