Abstract (en)

[origin: EP0708493A1] The connection terminal comprises a self-stripping connector (14) which offers at least one slot (15) into which the core of a conductor (11) may be clamped to make contact. The terminal includes a mobile section (16) and a clamp screw (18) which allows the mobile section to move in order to compress the cable(s) into the slots provided. The mobile element (16) has a U-shape with a middle section (19) extending in the direction of the slot and two sides (20A,20B) perpendicular to this section and parallel to each other.
