Abstract (en)  
[origin: EP0708503A1] The multichannel electrical connector includes a coaxial connection for each channel. This comprises a central conductor (7) and an outer conducting sleeve (10). The conducting rods (7) are situated within a box (3, 12) which consists of an L-shaped base (3) and a cover (12). The conducting rods are right-angled elements each with a section directed downwards to stand perpendicular to the printed circuit board (9) and a horizontal section (8) extending into a connector (9). The cover (12) of the box provides two earth planes (13,14) in its large surfaces and these are closer to the conducting rods than the conducting rods are to each other.
