Abstract (en)

[origin: EP0709730A1] A method of processing a silver halide photographic material comprising a film support and on one or both sides thereof at least one silver halide emulsion layer has been disclosed wherein (1) each silver halide emulsion layer comprises spectrally sensitised cubic silver chloride or silver bromochloride grains having not more than 25 mole % of bromide; (2) the material has a water absorption determined by the method disclosed herein of less than 4 grams per gram of gelatin coated; (3) processing includes development with a developing solution comprising thiocyanate ions in amounts between 10^{-3} and 10^{-1} molar.
