Abstract (en)
[origin: US5749438A] PCT No. PCT/DE94/00824 Sec. 371 Date Jan. 19, 1996 Sec. 102(e) Date Jan. 19, 1996 PCT Filed Jul. 18, 1994 PCT Pub. No. WO95/03091 PCT Pub. Date Feb. 2, 1995The invention relates to a safety device for emergency exits in vertical or oblique surfaces of buildings. The safety device essentially consists of a safety bracket (4) which, extends over the emergency exit in such a way that in the inoperative position its transverse rod (10) and the shanks (9) respectively lie beneath and beside the emergency exit. The safety bracket (4) is pivoted on the building. In an emergency, the safety bracket (4) is raised and stably supported in the safety position by two supports (12). Between the safety bracket (4) and the building there is a safety net (17) surrounding the emergency platform (5). People involved in an emergency can, in an initial stage, place themselves on the emergency platform (5) in the open air, in a safe position, from which they can escape or be rescued.
